

Quadratic Transformations

vertex form: $y = a(x-h)^2 + k$

+h left +k up
-h right -k down

$|a| > 1$ vertical stretch (narrower)

$0 < |a| < 1$ vertical shrink/compression (wider)

$a < 0$ (in other words, if there's a negative in front)

↳ then reflection over x-axis

List the transformations from $y = x^2$

① $y = 4(x+2)^2$

- Vertical stretch by 4
- Left 2 units (shift)

② $y = -8(x-5)^2 + 4$

- Shift right 5 units
- Shift up 4 units
- Reflection over x-axis
- Vertical stretch by 8

③ $y = -\frac{1}{2}x^2 + 2$

- Vertical shrink by $\frac{1}{2}$
- Shift up 2 units
- Reflection over x-axis

④ $y = \frac{4}{3}(x+4)^2 - 11$

- Shift down 11 units
- Shift left 4 units
- Vertical stretch by $\frac{4}{3}$

Write an equation w/ the following transformations: from $y = x^2$

- ① • shift left 4
• vertical shrink by $\frac{1}{2}$ $y = -\frac{1}{2}(x+4)^2$
• reflect over x axis

- ② • shift up 10
• shift right 8
• vertical stretch by 9

$$y = 9(x-8)^2 + 10$$

Write an equation given the vertex:

① $(-4, 2) \rightarrow y = (x + 4)^2 + 2$ *inside,
opp

② $(\frac{1}{2}, -4) \rightarrow y = (x - \frac{1}{2})^2 - 4$ outside,
same

Graphs of Quadratic Functions

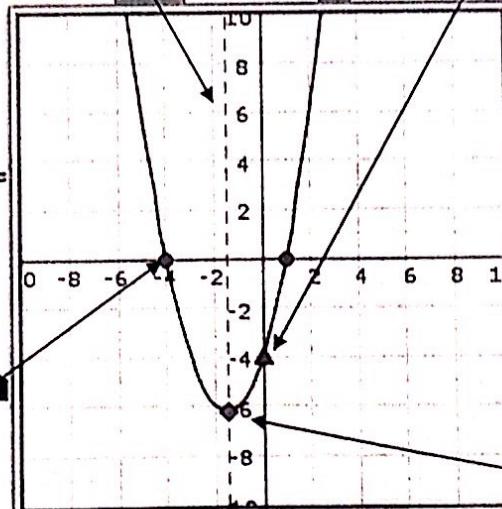

Vertex Form

$$x = h$$

Standard Form

$$x = \frac{-b}{2a}$$

Axis of Symmetry

- factoring

- "zero" in calc.

- look @ table in calc. where $y=0$

Vertex: Forms:

$$y = a(x-h)^2 + k$$

Standard:

$$y = ax^2 + bx + c$$

y-intercept

Vertex Form:

Plug in zero
for x

Standard Form:

$$(0, c)$$

Vertex

vertex Form:

$$(h, k)$$

Standard Form:

$\left(\frac{-b}{2a}, \text{Plug in } \frac{-b}{2a} \text{ to the eqn.} \right)$

Write how you will find each of the characteristics of a quadratic function in each form.
